

If you need a symbol or text copied and pasted, this blog post is for you. It's a difficult task to copy and paste symbols and text from a website. It can be especially challenging when the symbol or text is displayed in another color besides black, but it's not impossible! In AP APA style, for example, you'll have to add the word "\verb\enspace" before the symbol or word in order to get it to display right on your document. In MLA style, however, that isn't necessary because of how these styles format their citations. Some other document types like the Chicago Manual of Style also include the \verb\enspace entry in their style, which is why I'm using it as an example here. When you copy and paste text or symbols from a website into your document or essay, you have to understand what format the site is using. If you're making text quotations to include in your paper, for example, you have to use APA style. If you're copying the symbol for a particular chemical formula, you'll have to use MLA style. This can be tricky because sometimes symbols are displayed in different colors than they are on paper so that they stand out more vividly on screen for readers. This article gives several different methods of copying and pasting text and symbols. The first two methods are for copying symbols or text directly from Google Docs or Microsoft Word documents. They can be especially helpful if you plan on making lots of citations in your paper, since you can copy Google Docs' cite sources directly into your paper's bibliography section. To get started, open the source document in Google Docs or Microsoft Word. Press CTRL+A to highlight all the text in a document in either program. Alternatively, you can highlight the word or symbol that you want to copy and paste using CTRL+Click. Then press CTRL+C to copy it to your computer's clipboard. Press CTRL+V to paste the content into any Word document. Alternatively, you can CTRL+Click the symbol or text and go to "Paste Special" in your program's menu. This will bring up a window with options for how the symbol or word should be pasted. For instance, you can choose to "Paste as Text" if you want it to look like normal text in all-black letters instead of symbols. You can also choose "Paste as Symbol," which will paste it as a symbol wherever you chose to paste it (this is good for pasting symbols into Microsoft Excel spreadsheets). You can also simply highlight the symbol or text with CTRL+A and then press CTRL+C to copy it to your clipboard. You can then paste it into the same Word document you had open already, or into any other Word document on your computer. This second method is especially helpful if you plan on making lots of citations in your paper, since you can copy Google Docs' cite sources directly into your paper's bibliography section. This method is easier than using Google Docs or Microsoft Word, but it is also more difficult because there are no options to change the way the symbol or text is pasted when you use this method.
